

At Stamford Beauty, as I am sure that you are all (hopefully) aware... we put ALL clients and staff's safety at the forefront of the business and there have been some changes in the Hair and Beauty world that may apply to you and your appointment.

YOU MUST HAVE A SKIN PATCH TEST IN ORDER TO HAVE ANY OF THE FOLLOWING TREATMENTS...

- \* Eyelash Tint
- \* Eyebrow Tint
- \* HD Brows
- \* LVL Lashes
- \* Fluffy Brow/ Brow Lamination

Conditions of a Patch Test:

- \* Suffered with Covid-19
- \* Had the Covid-19 Vaccine
- \* It has been more than 6 months since you have had any professional tinting

If any of the above apply to you, we must perform a patch test prior to the above treatments. It has been discovered that the skins' pH balance changes and can cause sensitivity. When working around the eye area, Unfortunately, once the tint takes hold, there's very little we can do to remove from the skin and often, antibiotics are required from your doctor to ease this reaction.

We need you to have had a patch test 48hrs prior to treatment and I realise this is going to be tricky for some of our clients...

I am able to post out a patch test for HD Brows and LVL Lashes (as these are self contained kits) if required, however, you will need to pop in to the salon for a patch test for eyelash tint and eyebrow tint as these products may dry out on transit and not allow us a true test result.
